

COVID-19

WEEKLY REPORT

MIDDLETON BY THE NUMBERS: Aggregate 448 Cases in Last 7 Days at Large: +42 (New Actives)

March to Present
180
COVID-19 CASES
Middleton Residents@ Large
Mortalities 6

March to Present
268
COVID-19 CASES
Middleton Jail, Group Homes, DYS

COMMON COVID-19 TERMINOLOGY & INFO

Close Contact

Someone who was within 6 feet of an infected person for a cumulative total of 15 minutes or more over a 24-hour period* starting from 2 days before illness onset (or, for asymptomatic patients, 2 days prior to test specimen collection) until the time the patient is isolated. (source: cdc.gov)

Quarantine

The separation of a person or group of people reasonably believed to have been exposed to a communicable disease but not yet symptomatic from others who have not been so exposed to prevent the possible spread of the communicable disease. [Quarantine](#) may be voluntary or compelled by federal, state, or local public health order. (source: cdc.gov)

Isolation & Duration

Is used to separate people infected with SARS-CoV-2, the virus that causes COVID-19, from people who are not infected. People who are in isolation should stay home until it's safe for them to be around others. In the home, anyone sick or infected should separate themselves from others by staying in a specific "sick room" or area and using a separate bathroom (if available). Available data indicate that persons with mild to moderate COVID-19 remain infectious no longer than 10 days after symptom onset. Persons with more severe to critical illness or severe immunocompromise likely remain infectious no longer than 20 days after symptom onset.

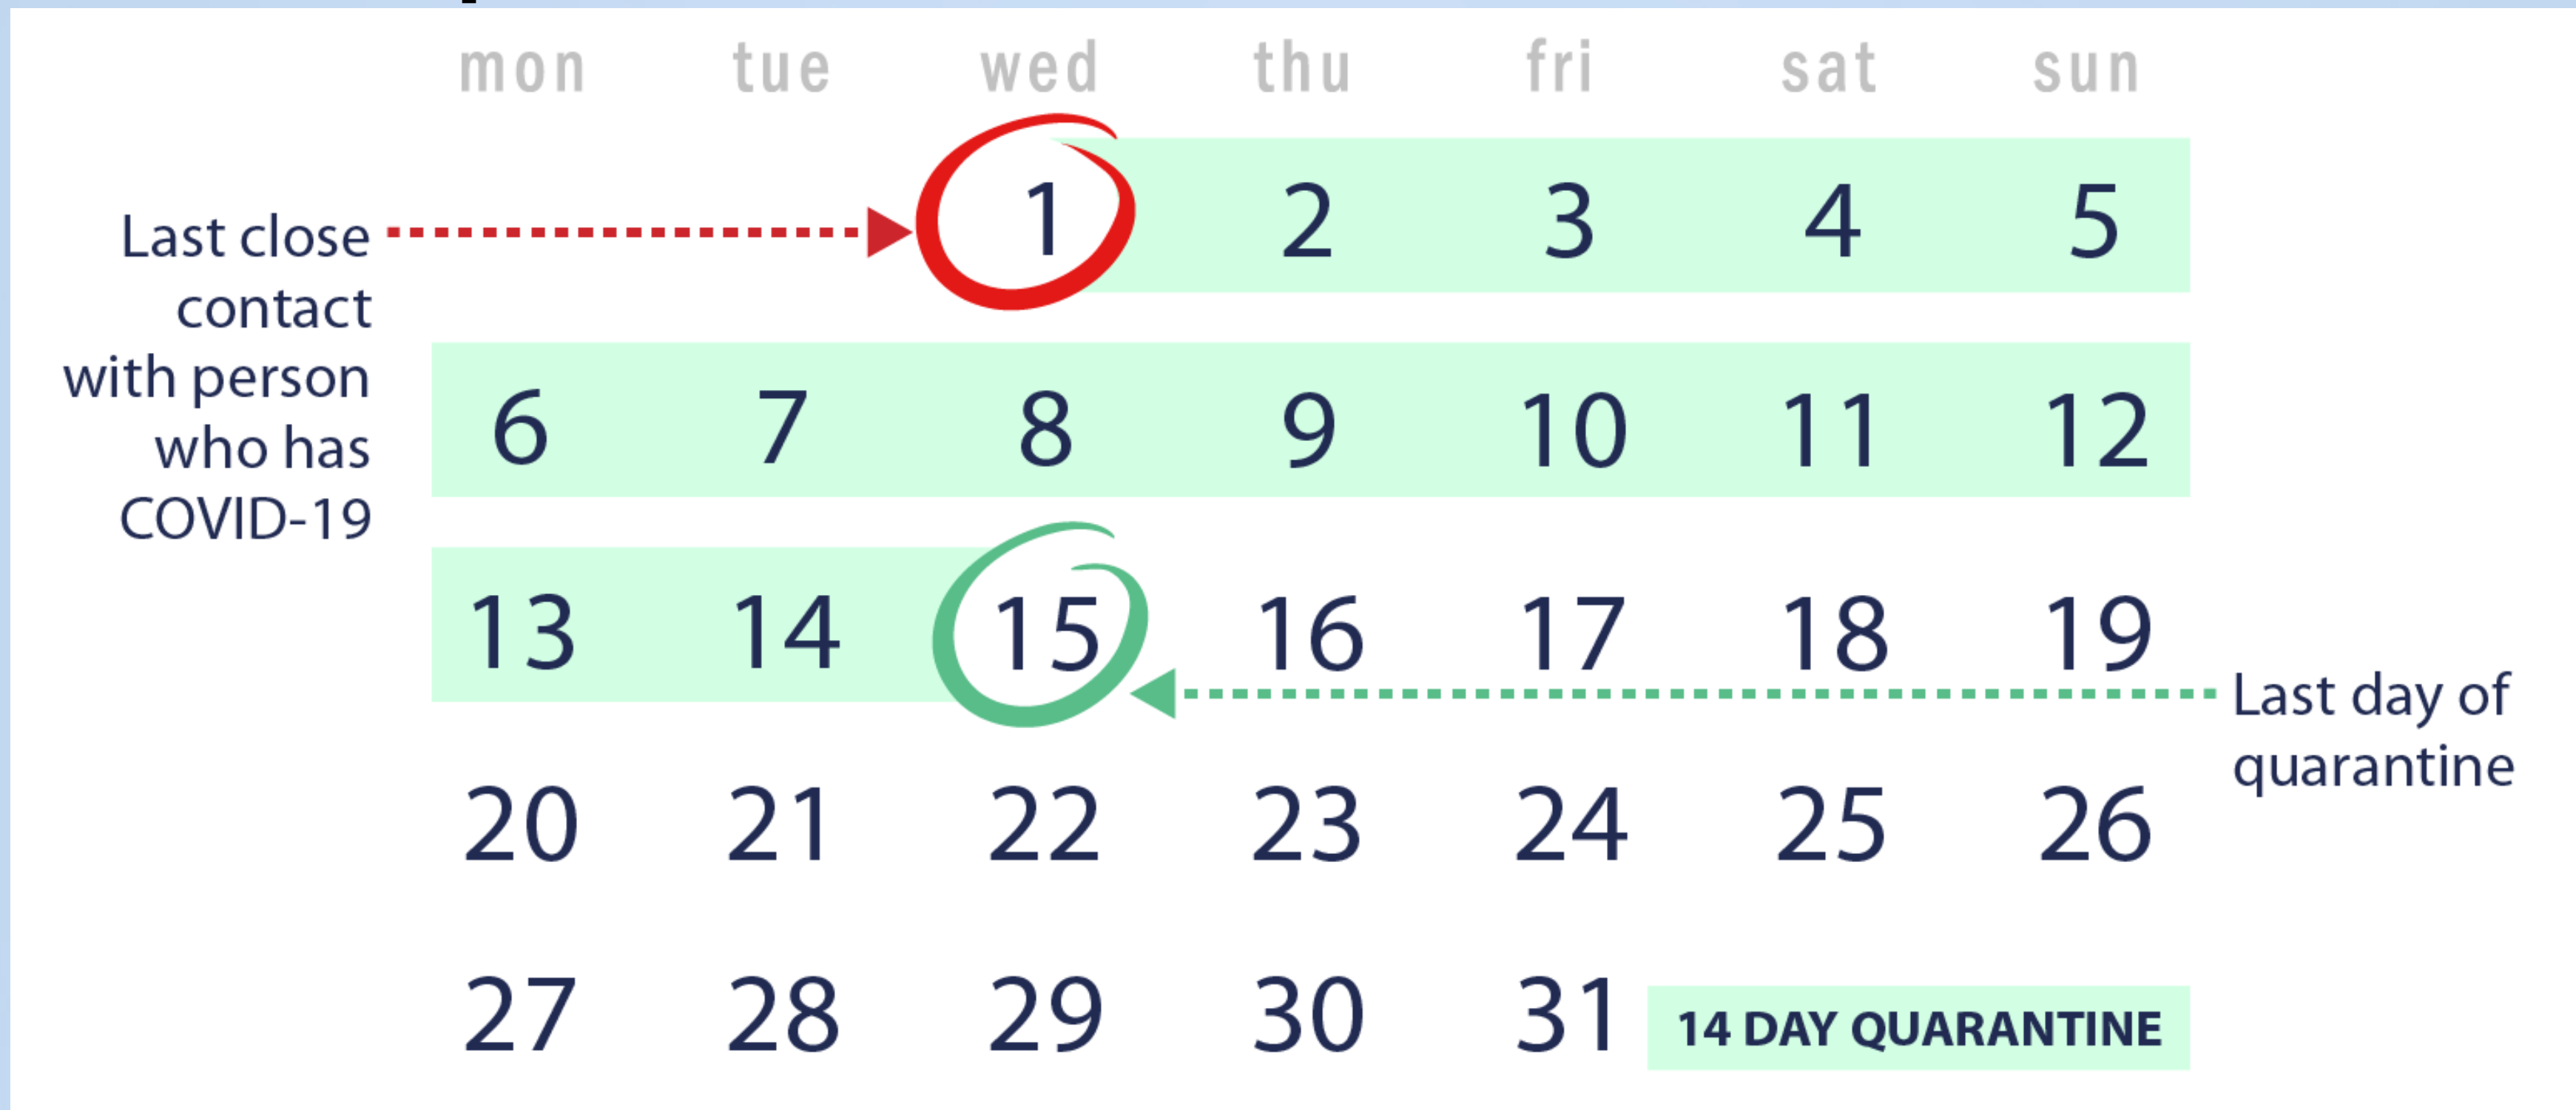

Isolation or Quarantine: What's the difference?

[Quarantine](#) keeps someone who might have been exposed to the virus away from others.

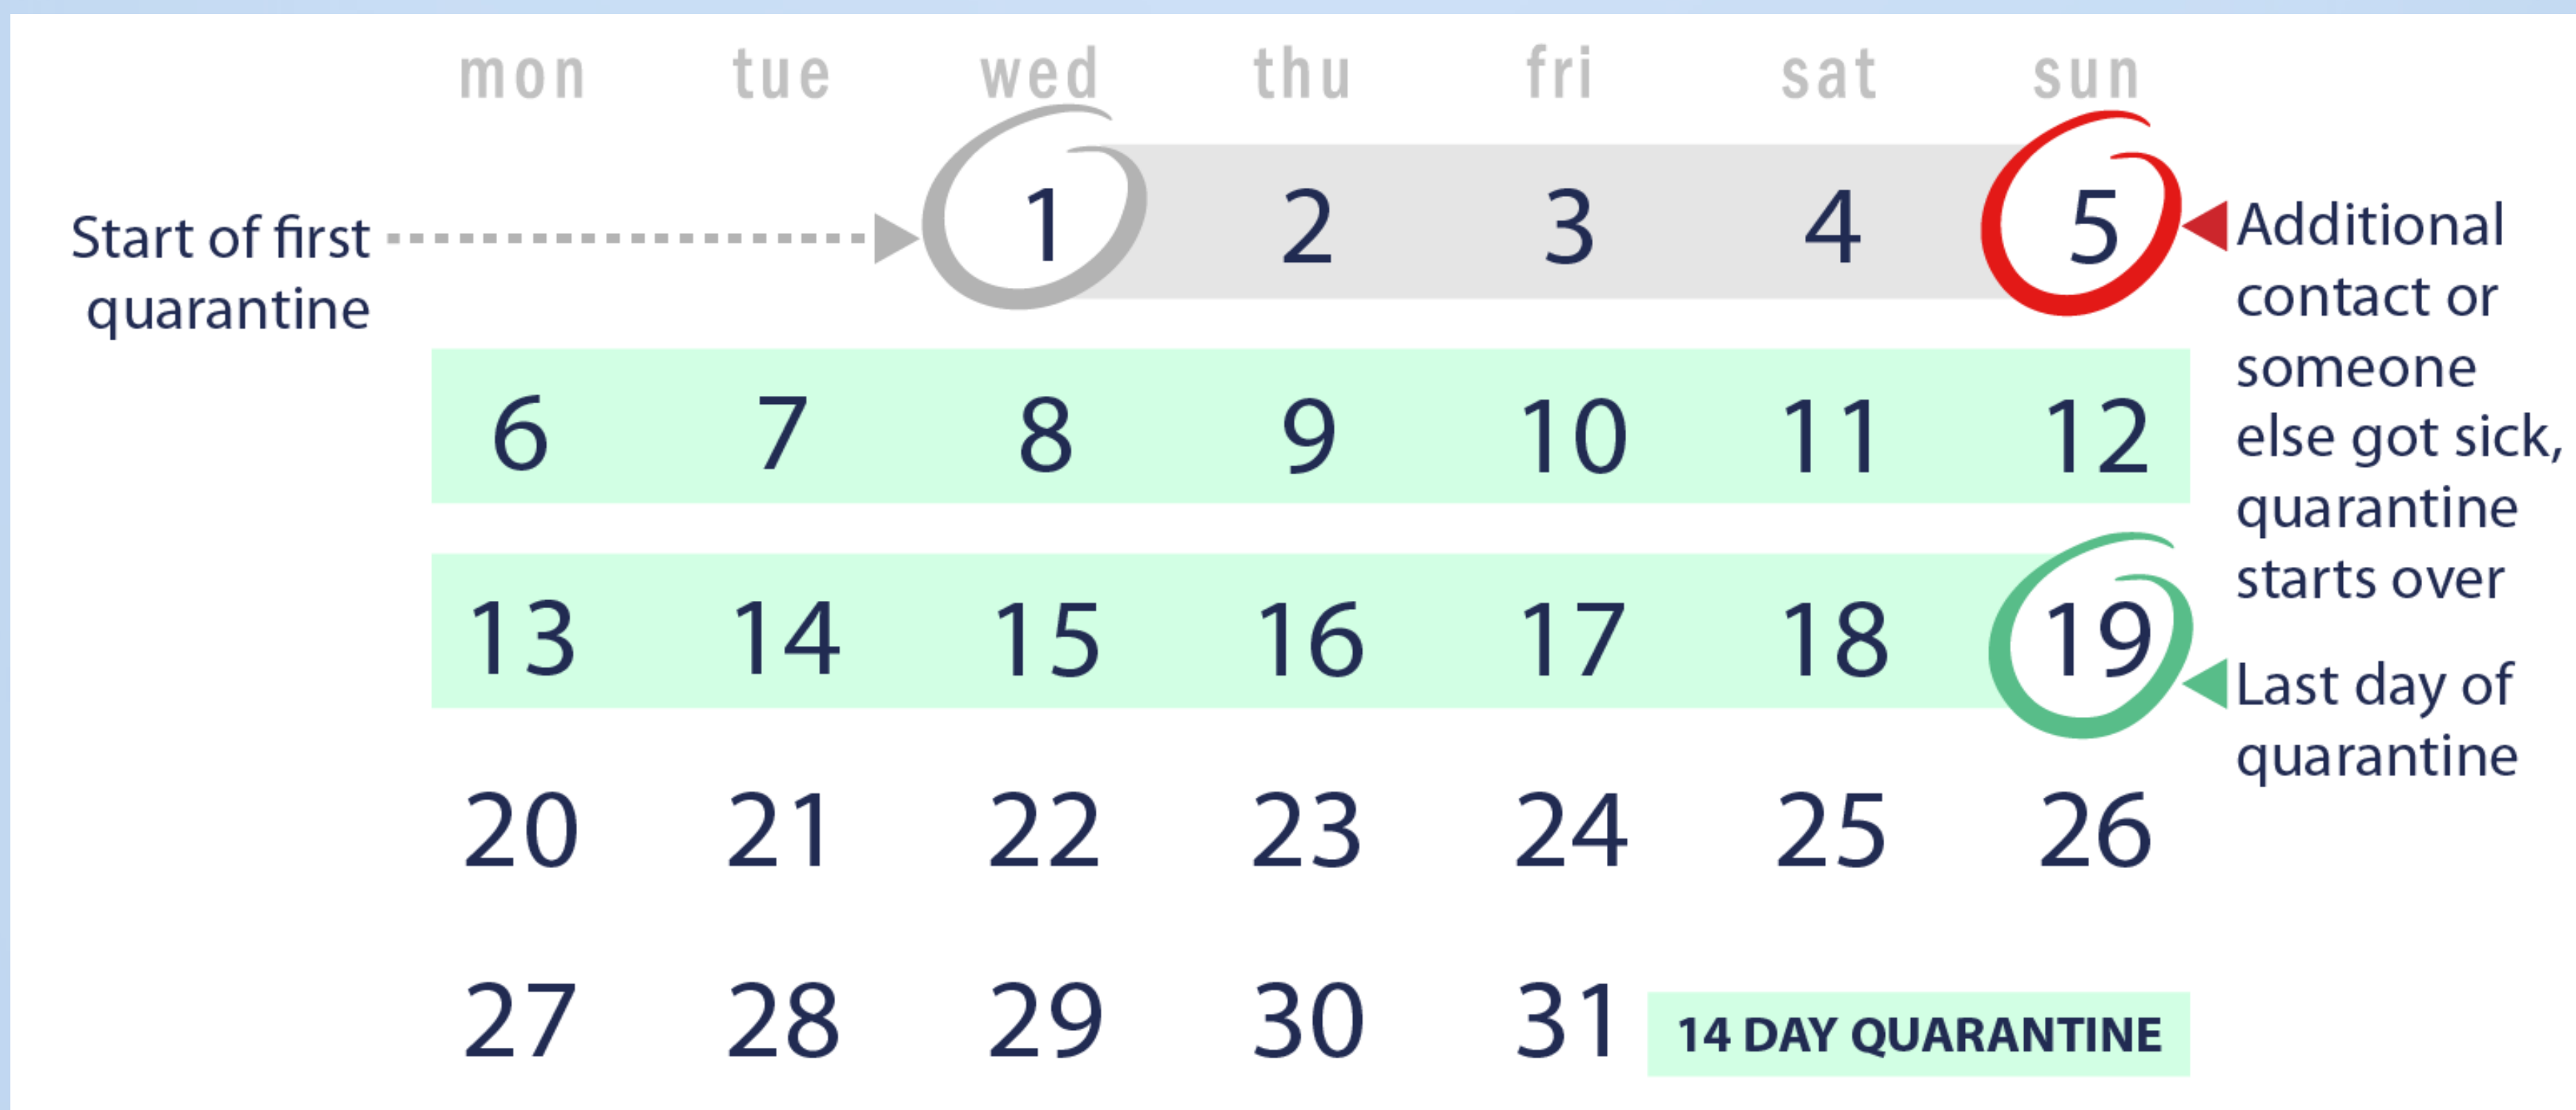

Isolation keeps someone who is infected with the virus away from others, even in their home.

Scenarios 1 & 2: Close contact with someone who has COVID-19 & "will not have further close contact" or live with the person but "Can" avoid further exposure.

Scenario 3. Under quarantine and you "had additional close contact" with someone who has COVID-19

Scenario 4: Live with someone who has COVID-19 & "cannot" avoid continued close contact (caring for person who is sick or don't have a separate room to isolate)
